1 Introduction

MD Ticker Panel is an AJAX based messages panel for PHP-Fusion Core 7 systems.

By **Ticker Admin** you can add messages, which will be visible in your added messages panel.

MD Ticker Panel Copyright © 2009 Michel van Es (MvE Designs)

```

2 Installation

1. Upload the folders **administration** and **infusions** to the root of your web server
2. Go to Admin Panel > System Admin > Infusions and **infuse Md Ticker Panel** Infusion
3. Go to Admin Panel > System Admin > Panels and add a new panel, select **md_ticker_panel** from select list.
4. After saving click on **Return to Panel Management** and click on **Enable** at the newly added panel.

We are now ready to add messages, which will be displayed in the panel.

3 Ticker Admin

Ticker Admin

Here you can manage two things, you can manage messages, and you can modify settings.

3.1 Settings

As you can see, the settings are already filled during infusing. There also are red exclamation marks behind DIV ID and DIV Class.

On mouse over you'll see this message:

Allowed: a-z, A-Z and _
Also requires adjustments in includes/mdticker.css!

On view this message says enough, both small and capitalized a till z are allowed, even the under score, for use in place of a space.

Explained: *(It is not advisable to change this if you do not possess the requisite knowledge of stylesheet code, PHP and HTML)*

DIV ID	Name of DIV ID, when you change the name, you must also modify the stylesheet file. "mdticker.css" This is the (DIV) holder of the messages.
DIV Class	Name of DIV Class, when you change the name, you must also modify the stylesheet file. "mdticker.css" This is the (DIV) holder of the messages.
Delay	Delay in seconds for the fade (slow disappearance) of the messages.
Fade	Two options, Yes or No.

3.2 Messages

Also during infusing at least one message is added for demonstration.
It's your choice to change or delete it.

Options explained:

<p>	The P element represents a paragraph.
 	The BR element forcibly breaks (ends) the current line of text.
b	The B element renders as bold text style.
<i>i</i>	The I element renders as italic text style.
<u>u</u>	The U element renders underlined text.
link	With this you can place a hyperlink. Link
img	The IMG element embeds an image.
center	The CENTER element is used to center the embedded content.
small	The SMALL element is used to reduce the font size of the embedded content (if defined in stylesheet file of the theme).
small2	The SMALL2 element is used to reduce the font size of the embedded content (if defined in stylesheet file of the theme).
alt	The ALT element is used to display the embedded content in the defined text color (if defined in stylesheet file of the theme).
- Select Color -	Choose a color from the selection list to display your selected text in a different color .

3.2.1 Adding messages

Adding a message is done by filling in the fields **Title** and **Message** and then click on **Save**.

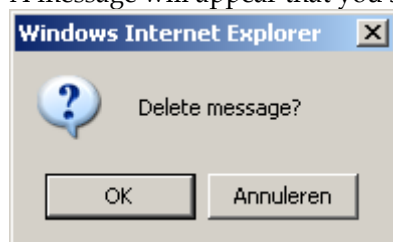

3.2.2 Editing messages

Editing a message is done by choosing the right message from the selection list and then click on **Edit**. After the message and/or title is changed, then click **Save**.

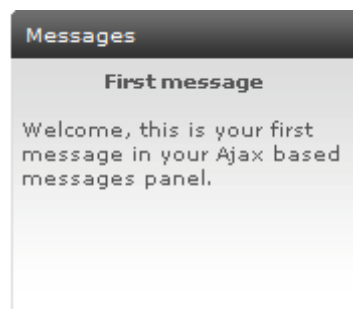

3.2.3 Deleting messages

Deleting a message is done by choosing the right message from the selection list and then click on **Delete**.

A message will appear that you should respond with OK or Cancel.

3.2.4 Example view in panel

Further explanation:

First message	Title of message
Welcome, this is your first message in your Ajax based messages panel.	The message

4 Uninstallation

1. Go to Admin Panel > System Admin > Infusions and **defuse Md Ticker Panel** Infusion
2. Go to Admin Panel > System Admin > Panels and delete panel **md_ticker_panel**
3. Delete folder **md_ticker_panel** from **infusions** folder
4. Delete image **mdticker.gif** from **administration/images** folder

5 Upgrade

Not applicable, there is no subsequent version of **MD Ticker Panel**.

6 Support

6.1 Downloads

The latest version of **MD Ticker Panel** can be downloaded from the parent site <http://www.mvedesigns.eu>.
