

# Blog System

Blog System 1.0.0  
PHPFusion Deutschland  
Handbuch Official Documentation

## **Introduction:**

Thank you for downloading the blog system

In this documentation you will find instructions and tips.

Support for this addon only on:

[www.phpfusion-deutschland.de](http://www.phpfusion-deutschland.de) – Official Author of this addon

[www.php-fusion.at](http://www.php-fusion.at)

[www.gfdf.de](http://www.gfdf.de)

Have fun using this blogsystem.

## **Setup / Prepare system:**

To install the blogsystem we recommend to set maintenance mode on first.

Create a backup of your database and website to set things back if something goes wrong.

Open folder „files“ and upload all files to your webserver.

Now open adminarea – system – infusions and install „Blog System Panel“.

A new sitelink „Blog“ is being created in your site navigation.

If you don't use standard navigation, please add the following link in your navigation:

infusions/blogsystem\_panel/blog.php

On adminarea – system – panels you may add the new panel „Blog System“ and activate it.

All done – installation is complete.

## **Functions**

Categories:

You can create single blogs and put them in categories as it is in the news system of PHP-Fusion.

Tagwords:

Add Tagwords to show all blogs by tagwords.

Hidden functions:

The blogsystem has 369 Icons, 247 Flags and several small functions you can easily use.

Icons are from <http://fontawesome.io>

To use an icon, just take a look in list on website, there you also find name of the icons.

Example:

fa-rub

You just need **rub**, this is the name of the icon. To show this icon in your blog just type the follow:

%RUB%

Same with flags from FamFamFam.  
For example: %DE% for germany.

You also can use individual username in blog:

Hello %USER\_NAME%, nice to see you.

Have Fun!
